

Made from Bagasse, a waste byproduct from milling sugar cane. The fibers are infused with concentrated oil eating microbes and nitrogen, enhancing the ability to break down and digest the oil or hydrocarbon.

Environmentally friendly material that is self-composting and turns crude oil into TOP SOIL.

Apply **H.O.S.E. PLUS** around the perimeter of the spill and continue applying the absorbent toward the center until completely covered.

Sweep the dry absorbent over the spill area to remove all surface liquids.

To remediate and dispose, put the contaminate outdoors in a compost pile, spread out & keep moist. Over the time self-composting properties will turn the oil into top soil.
